## **National Mission for Clean Ganga (NMCG)**

NMCG is the implementation wing of National Ganga Council which was setup in October 2016 under the River Ganga Authority order 2016. Initially NMCG was registered as a society on 12<sup>th</sup> August 2011 under the Societies Registration Act 1860. It acted as implementation arm of National Ganga River Basin Authority (NGRBA) which was constituted under the provisions of the Environment (Protection) Act (EPA) 1986. NGRBA has since been dissolved with effect from the 7th October 2016, consequent to constitution of National Council for Rejuvenation, Protection and Management of River Ganga (referred to as National Ganga Council).

## **Centre for Ganga River Basin Management and Studies (cGanga)**

cGanga is a think tank formed under the aegis of NMCG, and one of its stated objectives is to make India a world leader in river and water science. The Centre is headquartered at IIT Kanpur and has representation from most leading science and technological institutes of the country. cGanga's mandate is to serve as think-tank in implementation and dynamic evolution of Ganga River Basin Management Plan (GRBMP) prepared by the Consortium of 7 IITs. In addition to this it is also responsible for introducing new technologies, innovations and solutions into India.

## **Acknowledgment**

This river atlas document is a collective effort of a number of experts, institutions and organisations, some who had been associated with preparing the Ganga River Basin Management Plan (GRBMP) submitted to the Government of India in 2015, and others who joined later with their own independent expertise and enthusiasm. Contributions to the photographs and images for this document by individuals are gratefully acknowledged.

## PREFACE

The Centre for Ganga River Basin Management and Studies (“cGanga”) was established in the year 2016 as a comprehensive think-tank for river restoration and to assist the National Mission for Clean Ganga (NMCG), Jal Shakti Ministry, Govt, for “continual scientific support in the implementation and dynamic evolution of the Ganga River Basin Management Plan” for conservation of National River Ganga. In keeping with this goal, cGanga has been actively developing detailed knowledge capsules, tools and procedures to enable comprehensive and early rejuvenation of the Ganga River network across the whole basin. While a river basin approach is essential for analyzing and comprehending the Ganga river’s status and needs to regain her wholesomeness, the implementation strategies of the required interventions must keep in mind the role and individuality of each State. Thus, it is necessary to focus on state-level sub-strategies of natural resource management for holistic revival of River Ganga.

The present document attempts to provide a comprehensive picture of the Yamuna River network that is spread over seven states of India. This Atlas was created entirely by cGanga, with original mapping of all identifiable rivers, and with selective additional information culled from different sources for completeness. Many of the rivers and maps given here are not readily available elsewhere, and we expect them to prove useful to the many Central, State and other organisations engaged in river, water or natural resource management in the Yamuna basin.

In preparing this document dedicated members of cGanga spent a lot of time in diligently studying, analysing, acquiring and compiling diverse information from diverse sources. Many people and organisations outside cGanga also helped in its preparation, which aided in its comprehensiveness. We are grateful to one and all of them.

**VINOD TARE**

# INTRODUCTION

Yamuna is the fifth-longest river of India and the longest tributary of the River Ganga. It originates from Champasar (Yamunotri) Glacier near Banderpoonch peaks in the Har-Ki-Dun mountain range of Uttarkashi district in Uttarakhand. The river traverses through upper hilly terrain and enters into the plains from Saharanpur district of Uttar Pradesh and flows down up to its confluence with river Ganga at Prayagraj. It is a large basin that covers parts of the states of Uttarakhand, Uttar Pradesh, Himachal Pradesh, Haryana, Rajasthan, Madhya Pradesh, and the entire NCT Delhi. The catchment area of Yamuna contributes 40% to the Ganga basin area and supports 15.27% of the population of Ganga basin.

The present volume is a first attempt to map the rich river network of Yamuna in as fine a detail as possible. Much of the information contained in this River Atlas is not available in any other document and was created in original from available earth images with appropriate data and image processing tools and software on GIS platform. Naturally, there may be shortcomings in some of the maps herein, including missing small streams, which can be expected to be duly refined and included in later versions. Also, a river atlas is often useful in conjunction with other natural resource and anthropogenic information such as the distribution of rainfall and other climatic data, other water bodies, forest cover, elevations, soil types, other physiographic information, land use, tourist and pilgrimage centres, and infrastructure including roads and highways. Such other relevant information is also expected to be processed, assembled, and included later in a fuller version of this Atlas. In the meanwhile, it is hoped that this Atlas will provide a useful window to Yamuna River resources.

# YAMUNA BASIN: SALIENT FEATURES

S No	Particulars	Details
1	Basin Extent	Latitude: 22° 27' & 31° 28' N and Longitude: 73° 20' & 82° 00' E
2	Total Geographical Area (sq. km.)	341,628.31
3	States and their % area contribution in the basin:	Himachal Pradesh: 1.7%, Uttarakhand: 1.1%, Haryana: 6.2%, Delhi: 0.4%, Rajasthan: 29.7%, Madhya Pradesh: 40.5%, Uttar Pradesh: 20.4%
4	Population	341,628.31
5	Himachal Pradesh: 1.7%	40
6	Uttarakhand: 1.1 %	101
7	Haryana: 6.2 %	(Class I: 84; Class II: 69; Class III: 229)
8	Delhi: 0.4 %	54,497,411
9	Rajasthan: 29.7%	15.27
11	Madhya Pradesh: 40.5 %	50,774
12	Uttar Pradesh: 20.4%	Himalayan Portion: 1200 - 1600, Plains: 734.84
13	Average Temperature Range (oC)	2.0 - 45
14	Major Rivers	Yamuna, Chambal, Banas, Sindh, Betwa, Ken, Hindon, Kali Sindh, Tons
15	Number of Major Sub-basins	09
16	Number of Water Resources Structures	(Dams: 63, Barrages: 11, Weir: 04, Anicuts, Lifts, Power houses)
17	Highest Dam	Kishau Dam - 236 m
18	Longest Dam	Raj Ghat Dam - 10,790 m
19	Highest Barrage	Assan Barrage - 395.95 m
20	Longest Barrage	Gokul Barrage - 555 m
21	Total Storage Capacity of Projects (MCM/BCM) (Completed and under construction projects)	--
22	Number of HE projects (> 25 MW)	33
23	Number of Ground Water Observation wells	36,567
24	Number of CWC Sites	111
25	Water tourism and Sport sites	Tajewala Barrage, Kota Barrage, Rajasamand Lake, Nainbagh, Sangam (Prayagraj) etc.

# RIVERS OF YAMUNA BASIN IN VARIOUS DISTRICTS

S.NO	State	District	Area (sq. km.)	Population (Census 2011)	Growth Rate (%)	Population Density	River

# MAJOR RIVER BASINS OF INDIA AS LISTED BY CWC

Basin Code	Basin Name
1	Indus (Up to Indian Border)
2a	Ganga
2b	Brahmaputra
2c	Barak and others
3	Godavari
4	Krishna
5	Cauvery
6	Subernarekha
7	Brahmani and Baitarni
8	Mahanadi
9	Pennar
10	Mahi
11	Sabarmati
12	Narmada
13	Tapi
14	West flowing rivers from Tapi to Tadri
15	West flowing rivers from Tadri to Kanyakumari
16	East flowing rivers between Mahanadi and Pennar
17	East flowing rivers between Pennar and Kanyakumari
18	West flowing rivers of Kutch and Saurashtra including Luni
19	Area of inland drainage in Rajasthan
20	Minor rivers draining into Myanmar (Burma and Bangladesh)

## YAMUNA BASIN: AN OVERVIEW

<b>7</b>	<b>101</b>	<b>50,774</b>	<b>314</b>	<b>63</b>
States	Districts	Villages	Rivers	Dams
<b>25,950</b>	<b>11</b>	<b>341,628.31</b>		
River Network	Barrages	Basin Area		

40% Area of Ganga Basin, Support  
15.27% Population of Ganga Basin

Uttarakhand	1.1% of Yamuna Basin Area
Madhya Pradesh	40.5% of Yamuna Basin Area
Yamuna Boundary	
Ganga Basin	
Haryana	6.2% of Yamuna Basin Area

**Methodology:** The method adopted, in brief, to obtain the river network are stepwise as follows:

**Step 1 :** Tracing of river streams using Google Earth (.kmz file)

**Step 2 :** Verting of the stream maps with 30 m resolution DEM generated streams using SWAT. DEM is downloaded from USGS.

**Step 3 :** Streams' verification from Survey of India (Sol) toposheets.

**Step 4 :** Post-processing and cleaning of data for preparation of stream network maps.

**Step 5 :** Preparation of stream network map on GIS platform using ArcMAP 10.5.

**Disclaimer:** The accuracies of the maps generated by the above method are subject to the limitations of the data processing tools and software used for the particular geographical regions as represented in Google Earth images, and are subject to future refinement.

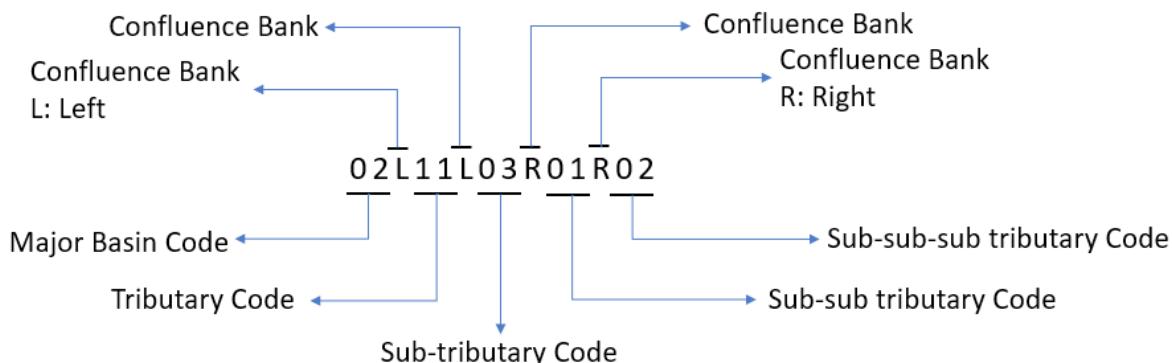

## RIVER CODIFICATION SYSTEM

In the present Atlas alphanumeric characters are used for coding the river systems within natural and administrative boundaries. Each sub step in codification system is assigned a digit which reflects the length of the code up to that sub step. The coding has been done for the two different types of compartmentalizing river basins as stated below.

- Codification system based on natural delineation
- Codification system based on administrative delineation

The natural delineation approach is better suited to study and understand the basin area as a natural ecological unit while administrative delineation is good for determining specific interventions and fixing responsibilities in the implementation of any project relevant to rivers. Both approaches are important for their own reasons and, therefore, it was decided to develop the codification system for both natural as well as administrative delineations.

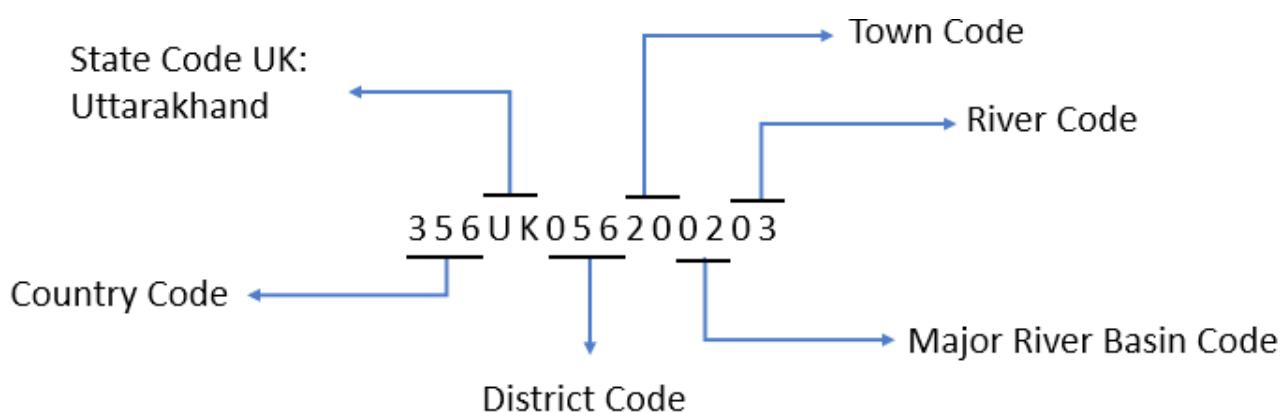

**a) Codification system based on natural delineation:** In the natural delineation approach, major basin codes given by CWC in River Basin Atlas of India, jointly published by CWC and NRSC, ISRO in October 2012, have been adopted here. These codes are accepted at regional level. In the second step, tributary code is given based on their confluence bank and their sequential number from the origin of the major river. R and L represents Right Bank and Left Bank, respectively, for the confluence bank in this code. For example, L11 in the code represents the 11th tributary (from the head of the major river) joining the major river at the left bank. In steps 3, 4, 5, etc. the same coding procedure as in step 2 is followed for sub-tributaries joining the tributaries and so on. Thus, the code can be extended without any alteration until it reaches down to the lowest order river.

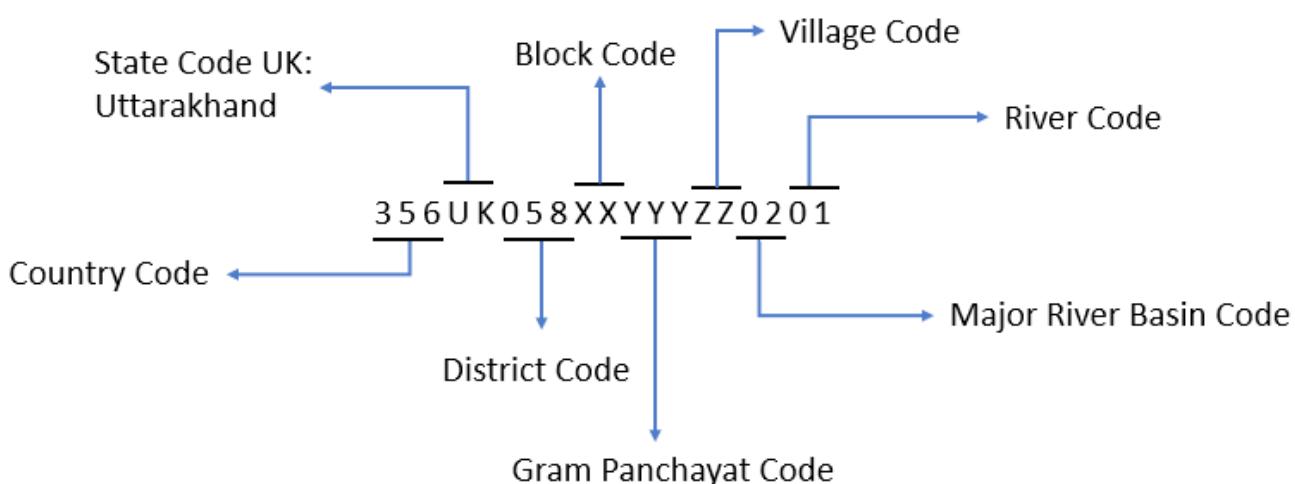

**b) Codification system based on administrative delineation:** In administrative delineation codes are generated separately for areas coming under urban and rural jurisdictions as further described.

**Codification system based on administrative delineation-Urban:** In administrative delineation-urban the first 3 digits of the code represent the country code adopted from ISO 3166-1. The next 5 digits give the state code and district code. State code is taken from transportation department and district code is adopted from census codes. The next 2 digits represent the town, which adopted from the census town codes. In the next step, 2 digits are assigned for major river basins and the codes are adopted from River Basin Atlas of India given by CWC. The last 2 digits of the code represent the river based on higher to lower river order approach, and if there are more than one river of the same order then code is allotted in alphabetical order.

**Codification system based on administrative delineation-Rural:** In administrative delineation-rural the first 3 digits of the code represent the country code adopted from ISO 3166-1. The next 5 digits give the state code and district code. State code is taken from transportation department and district code is adopted from census codes. Block, Gram Panchayat and Village codes are further generated based on district codes. In the next step, 2 digits are assigned for major river basin as per the River Basin Atlas of India given by CWC. The last 2 digits of the code represent the river code based on higher to lower river order approach, and if there be more than one river of same order then the code is allotted in alphabetical order.

# YAMUNA RIVER NETWORK

Yamuna River UID Code: 02R38

Basin area: 341,628.31 sq. km.

Major rivers: Chambal, Sindh, Betwa, Ken, Utangan, Hindon, Senger, Tons

Number of rivers- 314

Total length of rivers- 25,950 km.

# YAMUNA: MAJOR SUB-BASINS

Major sub-basins of Yamuna River are as follows:

- Chambal basin
- Sindh basin
- Betwa basin
- Ken basin
- Utangan basin
- Senger basin
- Najafgarh basin
- Hindon basin
- Tons basin

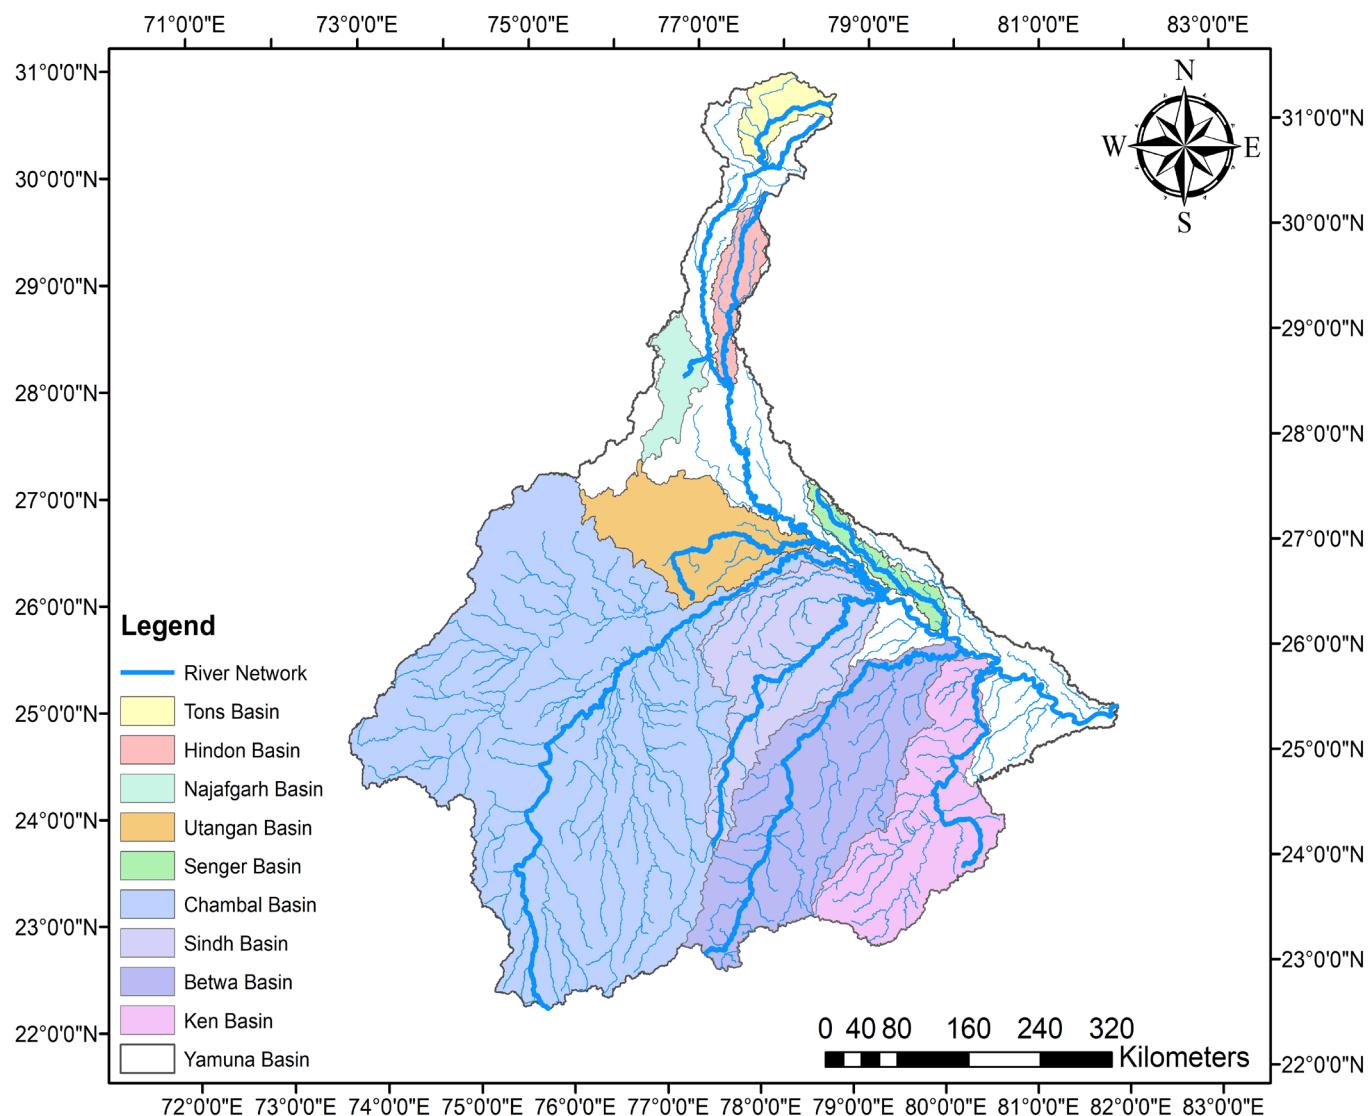

Figure: Yamuna River Network

# CHAMBAL BASIN

Chambal River UID Code: 02R38R14

Basin area: 142,809.03 sq. km.

Major rivers: Banas, Parbati, Mez, Kali Sindh, Kshipra, Parvan, Berach, Khari, Masi, Morel

Number of rivers- 118

Total length of river- 9,894.44 km.

A scenic view of a river flowing through a mountainous, forested landscape. The river, with its light blue-green water, winds its way through the center of the frame, surrounded by rocky banks and lush green vegetation. In the background, tall evergreen trees stand on the left, while a steep hillside covered in dense greenery rises on the right. The sky is clear and blue.
